

Problems to be fixed

In this section we talk about general bugs which will not be fixed by the current week end (May 7 - Sunday) but could be fixed before demo presentation and hence are listed here.

- **(Backend) Hosting website on AWS:** Due to some AWS issues, previously hosted website had gone down and hence the goal is to fix it before live demo in the coming week.
- **(Backend) Results of material filters:** The material filter might be giving inaccurate product listing and this could be an API issue.
- **(Frontend) Seller page bugs:**
 - Validation of input data on seller page.
 - Quantity add button
- **(Frontend) Product Listing page;**
 - Restrict selection to only one filter at a time.
