

## **Problems to be fixed**

### **1. Men/Women's page (5/1)**

- a. Filtering needs to be fixed. Right now only Brands is being filtered correctly
- b. For material and style, the dynamic rendering is not working properly. It isn't listening all the categories and when the user clicks on a filter, it isn't loading the correct products
- c. For occasion, more inventory is needed to fully test the product. It seems to work better than material and style, but sometimes doesn't render all the products
- d. For the Prada items in the women's page, the images aren't correctly matching with the product. This will be fixed by deleting the product and adding it back to the inventory
