Features that won't be fixed

In this section we talk about broad product features that will not be implemented/fixed as part of current project scope and are now officially considered as part of future scope.

1. **Feedback from Thrive Today team:** Include seller-buyer communication feature in the seller page. This can be in the form of chat or messaging. However, we will not have the time to implement this feature, so this won't be included in the final project.
2. **Optional feature**: Size and color filter is an optional feature and hence is moved to future scope.
3. Product features that could not be implemented because of time constraints:
   a. **Order Summary**
   b. **User Authentication**
   c. **User account management and order management**
   d. **Rating and review**
